British Naval Armaments.

From the Louise Tolograph, July 18th. The ugliest, strongest, and in every way most remarkable vessel of war which at present swims is a little beast about the size of a large bull-dog, the sea was launched, or rather floated, on the but marsupial, still found in the wilds of Van Die 12th instant at Portsmouth Dockyard. Proud men's Land. It differs in temper redically from as her designers and constructors may justly be every known besst, and is ther described of the Devastation, there can, at least, be no difference of opinion about her harribly ungainly appearance. The original Monitor was compared to a cheese-box on a board; our latest iron-cladis like a batcher's tray, holding three or four odd- to a veritable field. He then becomes instantly the shaped joints. The Royal Sovereign and Water- very type of serveless fary, attacking all before him. witch, which look something like the new turretship at a distance, were never comely; yet they left to him, either trace or quester; as long as a are positively things of beauty compared with shred of flesh remains to tear, or a last boue to shatthe Develation. This huge floating haltery, with | ser, he fights on, regardless of the numbers that sur her law hull and gun-towers, possesses no masts, rounds him, or of his own subsiding strength, until but only two poles for signaling, fore and aft, and at length his jaws susp faintly, and his life goes grashe has the further peculiarity of a false topside. dually out with an infernal snart. Though taken Nevertheless, it can not be doubted that in the dergoes not the slightest modification. He lives to new monitor we have the most formidable sea- the last the same surly life, and usually dies in some roling machine of war hitherto invented. Her mad streggle with the bars of his cage. After years strength lies in three chief points; first, her of experience he repeats the same ucts of profitless massive armor; next, her mighty offensive arma-ment; and third, her great capacity for carrying coal and steaming. As we have intimated, she conl and stenming. As we have intimated, she spreads no canvas at all : the spars that helped He shows not the smallest attachment to his guardto overturn the Captain, and all the incumbrances laus or keepers, whom he menses and swears at of single and tripod masts must have been abol- from the moment they approach him till they pass ished; the new model is stripped of everything completely out of sight. When tired or overfed be in the way of sticks, except the bit of a clothesprop planted forward and aft. She can carry to sea no less than 1,800 tons of coal, which will feed two pairs of engines, driving twin screws, independent of each other, and, with full boiler- like biscuit, and usually swallows entirely. power. The force of this summense conjoint ma- No animal can figur him, and he has repeatedly chinery may be set at 5,600 horses. The Warrior can stow no more than 800 tons of coal, and the his insanc fury gives him an inextinguishable cour-Monarch only 600—two vessels which we take as would have been defeated, but that one of them showing good speed and fair rates of consumption were an armed collar, and he describes the aspect of in fael. With such a store, according to the official calculations, the Warrior could run for seven "With his back to a large overlanging stone, days and twenty-three hours, accomplishing 2,100 there stood, half-crouched before the dogs, the most knots; and the Monarch, with her supply, would horrible-looking heast imaginable. His contour go for eight days and eighteen hours, traversing meanwhile 2,310 knots. This is at the rate of eleven knots an hour, at which speed the Devas- name. What struck me first was the look of sartation would probably be able to continue for casm expressed by the drawing down of the corners twenty-five whole days; making a run, if neces- of the lips-an expression taken also by the ass, sury, of 6,000 or 7,000 miles before she had come when over termented, and unable to intimidate or to the bottom of her ecol-bankers.

can make a swift journey in any direction, dealing her tremendous blows, annihilating with her ram or enormous gons the enemy even on the high seas, yet still having feel enough left to come disabled, or if by some chance she fell short of lus are small, black, learing bends, fraught with de impotent as a raft; but her iron vitals are protected by a system of armor to which that upon the Warrior and Achilles, and such earlier plated ships, appears, as it were, mere pasteboard. The mail is not built into the lines of the Devasta-tion; it is, so to speak, buckled round ber in an immense baldric of metal and teak, which, with a depth of nearly ten feet amidships, covers her revives the interest in the remarkable discoveries hull from the main-deck to some distance below made by the late English deed-sea dredging explorathe water-line. At its thickest portions this thous in the Mediterranean Sea. It seems, as Nature belt is composed of 14 inches of metal and 18 of remarks, that Humboldt, as long upo as 1812, mainwood, while below the water-line it lessons off to tailed that such a low temperature exists at great 10 inches of motal, and towards the stem and stern to 8 inches. The deck is covered in with to the Equator. The temperature soundings taken 3 inches of rolled iron and thick teak planking; in the last English expedition show that the bestom but upon that platform rises a sort of iron furtress of the sea off Portugal below one thousand fathoms containing the two turrets, the fannel, steering ranges from thirty-nine to thirty-five degrees, or box, and all the large openings to the interior about the freezing point. In the Mediterranean the an oval breastwork, in fact, which protects the temperature beneath the hot surface stratum of water is uniform to any depth-namely, about fifty five base of the turrets, and enables the gams to be degrees. It is naturally inferred that in the Atlanfired with the very considerable freeboard of 13% tic and Parific occans an undercurrent of polar icy feet. This fortress on a chip carries 12 and 10. water is flowing southward under the warmer trop inch armor, and has a deck protected by seven leaf waters; and this is sustained by the discovery text of mappart, over which the vast artillery of at great depths, of polar animals in the waters of the tamble are manufacture model for. That artillery is a provided and Cubs. The English expedition under the terrible sea monster would fire. That artillery Professor Carpenter, the well-known physiologist will consist of four 35-ton guns. The vessel was has also detected the existence of an outward unbuilt for 30-ton guns, but the bombardiers are as descurrent in the Straits of Gibraltar, which carries busy day by day as the iconmongers, and our back into the Atlantic the water from the Mediter monster will therefore mount the new gigantic raneau that has undergone concentration by the exweapons, which have lately been proved.

Here, then, lies the chief characteristic of the

new fighting-ship; she can be no cruiser, for

own missiles? The answer is easy; at close pures the polar and equatorial areas, and shows that quarters she would most certainly be pierced by such campon as she is to carry for even the 95 ton such cannon as she is to carry, for even the 25-top the same relation to the latter as the Mediterranean gun at 200 yards, this very week, has sent a Pala foot of teak behind it. The 35-ton gun would the water within its area, thus constituting the motherefore breach such armor, massive though it tive force of the ocean currents. be, as that of the new monitor, and thus, although Tag. Human Ear.-It would seem that all our notcal fighting is, of course, a very different thing | bearing is done in a very literal sense under water, from potting at a stationary target, the guns claim as shown by the following extract from a London still the mechanical victory. Meantime the same | paper: designer who drew the lines of the Devastation-" outline plans (not on extravagant dimensions) outline plans (not on extravagant dimensions) panic membrane, behind which is a cavity known as to carry 20-inch armor both on broadsides and the 'drum;' the drum is separated from the brain and so, we suppose, the prodigious rivalry of cavity of the drum stretches a series of four little cannon and plates will go on till Neptune, as in as an anvil. Behind this bony partition, which is thick, that the designer is obliged to cut away is an apparatus inside the labyrinth admirably adaptdouble bottom, with four feet six inches of in-tervening space and that to fit ber out 5,628 tons of dead weight will be put into ber, they will appearance a musical instrument, with its chords so stretched as to accept vibrations of different periods, and transmit them to nerve filaments which traverse the organ. Within the ears of men, and without n agest commanding vessel.

THEOD. C. HEUCE, Fert Street. ble out, then make their tern carefully and return | etc, commonly employed as filters.

AN UNCOMMONLY DISAGREEABLE LITTLE BEAST One of the most curious and interesting papers is the English magazines for July, is Mr. Leakey's no count in S. Reel's of the "Tasmarian Devil" This

"His initural propensities are those of the gluttopous or sluggish kind, and he will be quiet enough when gorged with fiesh and left to undisturbed repose, but the slightest provocation, the merest and nuistentional observation will turn him at once inflead or living, and flying with equal forceness at a nastlif or a barn door. Nor is there, while life is till they break out anddenly into a piercing bark becomes stunid or sleepy, rolls himself up to a cor ner, and fulls into a leaden slumber from which it is not always easy to rouse him. Nothing can be chesper than to feed him. He will be satisfied for days together with huge bones, which he cracks up een known to best off a whole troop of dogs, and

was villelnous; in form, he resembled whadger, but his physiogenomy was literally disbolical, and quite explained and justified his apparently exaggerated escape from its tormentors. His jaws were juswide enough spart to reveal his large white teeth without parading them, and from between these issued a continual growl, that seemed to unwind from without fuel she would lie helpless; but she can a nobble in his throat. But what most arrested me rush forth from a harbor, and, whatever the wind, was the animal's infernal eyes. The eyes of the wildcat are said to be the most savage-looking in nature, but there is about them an expression of necompromising ferocity which is frank and numistakable. Such might have been the eyes of Marius, which disarmed the affrighted slave commissioned to hard to her lair in share. If her engines were execute him in his prison. The eyes of the surcophicoal, she would wallow on the ocean as atterly sign, but close and impenetrable. Such must have been the eyes of Burke, while hiding the plaster in his hat, and watching the friendless Italian boy from the dark arches of Great Queen street

SOUNDINGS IN THE ATLANTIC AND PACIFIC -The Count Pourtales, to explore the sea at great depths in the southern Atlantic and along the Pacific coast, depths in tropical seas as can only be accounted for by the hypothesis of undercurrents from the Poles coss of evaporation in its lossic. Professor Carpen It is quite certain that nothing foreign now ter confirms the theory previously arged by Captain Maury, that the cause of the superficial incurrent is affect would keep out one shot from those colossal pieces; but supposing the Derusia of the Mediterranean being denser, from craporafrom would she herself be proof against her tion, than the water of the Atlantic. He then comliser shall clean through 1414 inches of iron, with polar cold will be to produce a continual descent of
